

KnowHowHere Facilities Management

LOCATION TECHNOLOGY

Modern smart devices support a range of technologies for location sensing. From GPS to low power technologies such as RFID and Bluetooth, to passive technologies such as QR Codes. These waypoints allow KnowHowHere to deliver the alerts, guidance and other location specific information people need as they move around Defence installations.

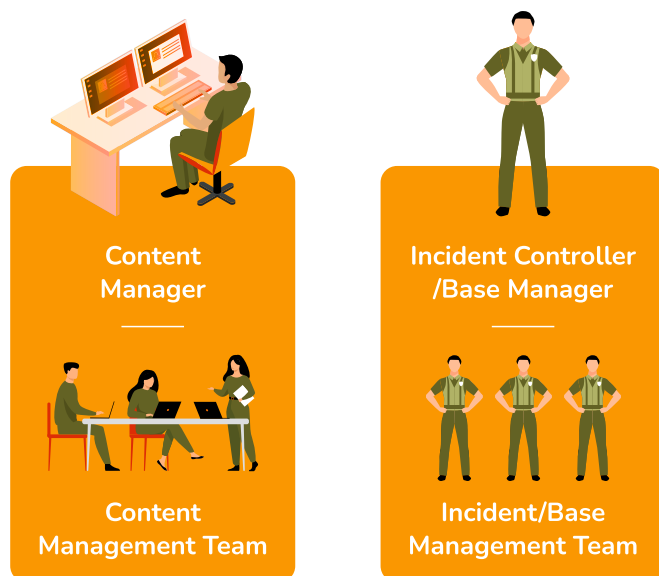

LOCATION INTELLIGENCE – PERSONNEL

Based on their location and proximity to equipment, personnel are provided with the precise information they need. While this 'just-in-time, just-in-place' information is always valuable – it becomes critical in an emergency such as a fire or intruder.

LOCATION INTELLIGENCE – MANAGEMENT

The KnowHowHere Business Intelligence Platform gives incident managers a real time view of the location and status of every deployed worker and asset, along with rapid tools to manage content delivery.

ON SITE TO DEFENCE SYSTEMS – INTEGRATION

The KnowHowHere API integrates with internal and external systems to ensure data is correct and current - in both directions.
